

Hello AP Biology Students,

This course is designed to be colleges' introduction to biology courses covering a lot of advanced content in a timely fashion. We will be running through **highlights** of the chapters assigned during the school year, therefore you will be responsible to read and take notes from your book to cover the rest of the content (you should do this as well for the Summer Assignment Chapters).

The summer assignment is all of Chapters 54 - 59 compiled into one grade in August. You will be responsible for understanding the content of these chapters, since they will be on the AP Biology Test that you should take in May of 2026. **If you are a transfer student or decide to take the class in August, all of these Summer Assignments must be completed by September 22nd (Mid-quarter of Q1).**

I will be assigning each Chapter Test on a specific date to be electronically completed via Google Form that I will post on Google Classroom. All of Chapters 54 - 59 PDFs from the book will be posted in Google Classroom for convenience. If you would like to get a hard copy of the book, please [email me](#). **I will post a schedule for all Chapter tests mid-June.**

If you do not complete and share the test answers by 8 am on the due date, scores will be lowered by 5% each day up to 5 days. After 5 days, the score will be a zero and you may be asked to drop the class. If you do not complete a test, you will be asked to drop the class.

Grades will be reviewed the week of September 22nd and those with a 75% or lower will be contacted and given the option to leave the class by the add/drop period in first week of October.
